

Capture based aquaculture on Arctic
cod
-
state of the art

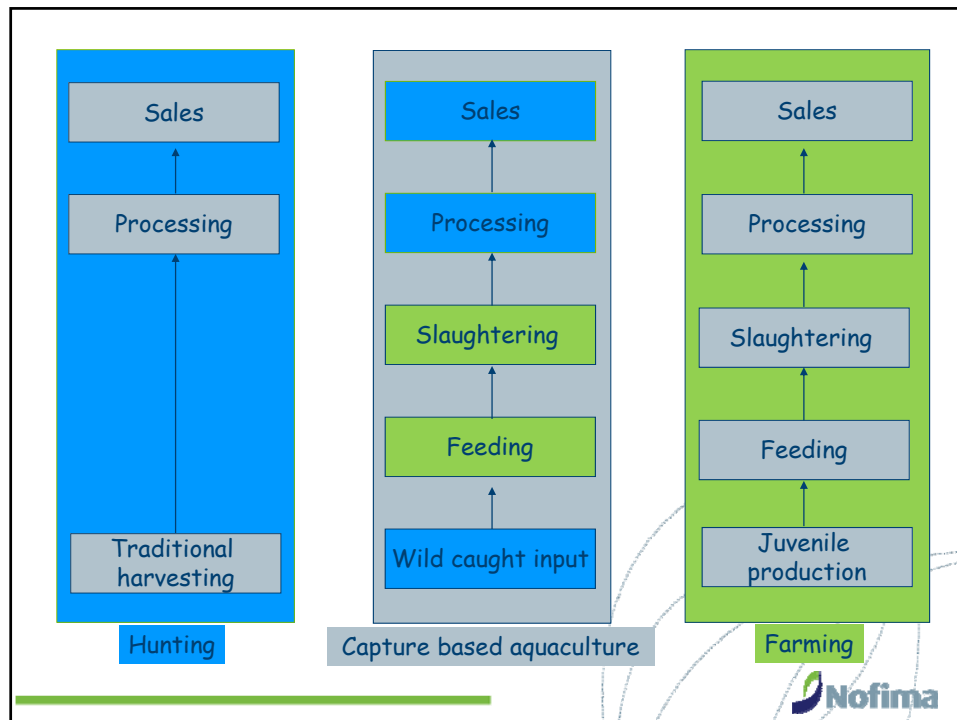

Øystein Hermansen
and
Bent Dreyer

The slide features a dark blue background with white text. The title is centered, and the authors' names are positioned below it. A green horizontal bar is at the bottom left, and faint white curved lines are visible in the background.

- Why capture based aquaculture (CBA)?
- CBA on Cod - the state of the art
- Challenges

The slide has a white background with blue text. A green horizontal bar is at the bottom left, and faint white curved lines are visible in the bottom right corner.

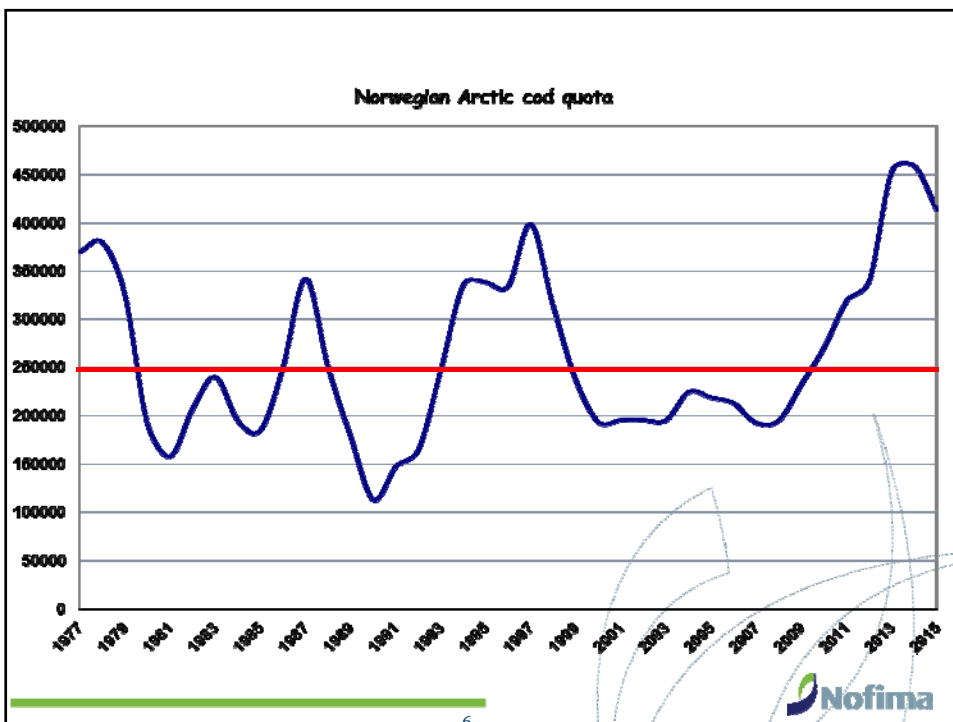

Arguments for CBA

- Limited - and often decreasing - wild resources
- Adds volume and value to TAC
- Consumer preferences - fresh seafood
- Longer shelf life
- Input uncertainty
 - Volumes and timing
 - Quality
- Farming - too costly

Quota premium - it works!

- Incentives for activity - likely temporary
- 2008 - ca 25 % bonus
- 2013 - expanded ca 75 % - very strong incentive

15

- Relatively small volume landed live
 - Could be expanded
 - Significant compared to fresh sales in June - Oct.

Further developments

- 10% drop in cod quota
- Quota premium until 2018
- Harvesting strategy - more concentrated in space and time
- More important to add value to TAC
- Input uncertainty
 - Volumes and timing
 - Quality
- Market:
 - Consumer preferences - fresh seafood
 - Longer shelf life
 - Continuity
- Farming - still too costly?

Challenges

- Technology and biology:
 - How to reduce risk and costs in harvesting, storing and processing?
- Public governance:
 - Will the quota premium survive?
- Knowledge:
 - How to develop and share?
 - How to integrate fisheries and aquaculture?
 - How to avoid opportunism?
- Market:
 - Product mix and labeling
 - Logistics and shelf life
 - Reduce volume and quality uncertainty
- Structure:
 - How to organize the value system?
 - How to share risk and profit in a fragmented value system?
